

0. Do not follow this guide if you are streaming or if anyone else can see your screen.
1. Sign in to Discord using a web browser (like Chrome) or the Discord desktop application.
2. Press **Ctrl+Shift+I** (Windows, Linux) or **Command+Option+I** (Mac) to open the web inspector.
3. Switch to the **Network** section in the web inspector top bar
4. Click on the **XHR** button
5. In the list on the left, click on the line named **library**. If you don't see it, perform a refresh by pressing **Ctrl+R** (Windows, Linux) or **Cmd+R** (Mac).
6. In the list on the right, in the **Request Headers** section, look for a line labeled **authorization**.
7. Copy the text next to authorization and paste it into the token field in Ripcord.

Do not allow anyone else to see this token. If someone else does happen to see it, change your Discord password. Changing your password will make the old token useless. Anyone who took your token cannot change your password using the token.
